## About Magic Fish™

Scientific name: *Nothobranchius Korthausae*

There's nothing fishy going on here! Simply follow the step-by-step instructions and with proper care, you can watch your Magic Fish™ grow and develop right before your eyes!

This educational play kit is an exciting new way to teach science. It also makes the perfect gift for children.

# Getting Started

Before you begin hatching your Magic Fish™, you will need the following supplies:

<p>Fish bowl</p> 	<p>Transparent container that will hold eight (8) to twelve (12) ounces of water</p>
<p>Bottled water</p> 	<p>Eight (8) to twelve (12) ounces of bottled spring water at room temperature</p> <p><b>Do Not Use:</b> tap water, distilled water, cold water/water below room temperature, carbonated water, or water with enhanced minerals.</p>
<p>Non-iodized salt</p> 	<p>One (1) container of non-iodized salt</p> <p><b>Tip:</b> Can't find non-iodized salt? Look for the following names/phrases:</p> <ul style="list-style-type: none"><li>• "Kosher Salt"</li><li>• "Natural Sea Salt"</li><li>• "This Salt Does Not Supply Iodine, a Necessary Nutrient"</li></ul>

The Magic Fish™ kit contains everything you need to hatch your fish, including:

Box #1	The miracle pouch- contains coco substrate infused with fish eggs. The coco substrate is the black material in the miracle pouch, which carries the Magic Fish™ embryos.
Box #2	Magic Fish™ food: Brine shrimp
Box #3	Two plastic hatching containers
Box #4	Magic Fish™ tool kit: <ul style="list-style-type: none"><li>• Spoon</li><li>• Siphon</li><li>• Magnifier</li></ul>

## Magic Fish™ Food Preparation

You must prepare your fish food before hatching your Magic Fish™. Always prepare the fish food in advance because the live brine shrimp can take up to 48 hours to hatch.

**IMPORTANT!** You never want to run out of Magic Fish™ food, order today by visiting

[www.infmetry.com](http://www.infmetry.com)

### Step 1: Open Box #3

Remove the two (2) hatching containers and fill them with clean bottled water.

### Step 2: Open Box #4

Remove the spoon in your tool kit and pour one (1) level spoonful of “non-iodized” salt into each container. Stir gently to dissolve the salt.

### Step 3: Open Box #2

Sprinkle a small amount of fish food into each salt water container. It is not necessary to cover the entire surface; the less food on the water surface, the more shrimp will hatch.

**IMPORTANT!** Close the fish food pouch after use.

# Magic Fish™ Hatching Guide

**Step 1:** Pour eight (8) to twelve (12) ounces of bottled spring water into the fish bowl.

Make sure water is at room temperature and away from air vents.

**DO NOT** place any rock, plant, or other objects in the fish bowl until your Magic Fish™ are at least 4 months old.

**DO NOT** hatch the Magic Fish™ in an aquarium.

## DID YOU KNOW?

The best temperature for hatching Magic Fish™ eggs is around 64-86 degrees Fahrenheit.

## Step 2: Open Box #1

Using the attached string to avoid damaging fish embryos, gently remove miracle pouch from the plastic bag. Submerge miracle pouch into the water.

## Step 3: Open Box # 4

After 24 hours, use magnifier to spot your Magic Fish™. Keep in mind baby Magic Fish™ like to hide in coco substrate, the brownish material found in your miracle pouch. Gently tilt the fish bowl to one side and you will see tiny fish dart around.

If you do not see any fish after 72 hours, please contact support (877)544-6837.

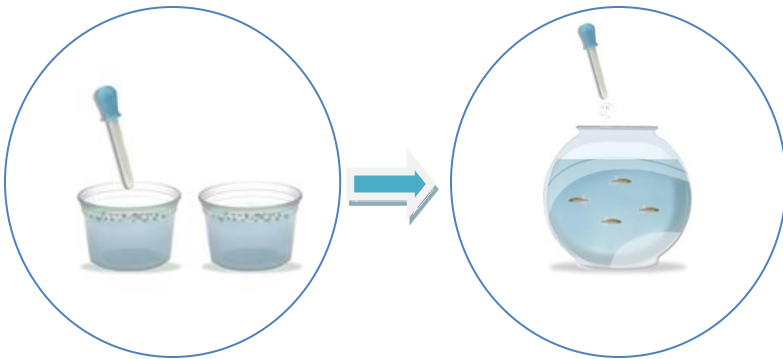

## Magic Fish™ Maintenance

After your Magic Fish™ hatch, it is very important to keep them healthy and happy.

### Feeding Instructions

1. Open Box #4.
2. Use siphon/dropper to collect the brine shrimp from the plastic hatching container then empty into fish bowl.
3. Feed your Magic Fish™ three (3) full siphon/droppers a day for the first month. After the first month, feed your Magic Fish™ six (6) full siphon/droppers a day.

**IMPORTANT!** Magic Fish™ must have food to survive and should never go without eating.

## Maintaining Water

To keep your Magic Fish™ healthy, you must change their water twice a week. Wait one week after your Magic Fish™ hatch before beginning this process.

1. Carefully remove half of the water from your fish bowl and add an equal amount of bottled spring water.
2. Repeat this process every 4-5 days.

**IMPORTANT!** Be careful not to collect any of your Magic Fish™ while removing the water.

3. After 4 weeks, carefully transfer your Magic Fish™ with existing water and coco substrate into a larger container. Gently add clean bottled water to the new container.

**IMPORTANT!** Baby fish like to hide in coco substrate. Make sure to transfer the coco substrate along with the fish and water. Coco substrate will gradually disappear as you change the water.
